                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel human polynuclectide and the encoded polypeptide. A polynuclectide of the invention may have a use in gene therapy. An oligonuclectide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynuclectide or as a probe for detecting the polynuclectide. The polynuclectides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynuclectides are useful as pharmaceutical agents. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     190 TACCAGTITGATGCCTTCTATGGGGAGAGGAGTACTCAGCAGGACATCTATGCAGGTTCA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             250 GIGCAGCCCAICCIAAGGCACTIGCIGGAAGGGCAGAAIGCCAGIGIGCTIGCCIAIGGA

This CDS clone is a part of a collection of human full length
This CDS clone is a part of a collection of human full length
Eavyression clones generated by BD Biosciences Clontech and the
Harvard Institute of Proteomics. Each CDS has been cloned in two
forms: with and without stop-codon (to allow fusion with C-terminal
tag). The CDS has been directionally cloned using BD In-Fusion(TM)
cloning system between the Sall and HindIII sites of the pDNR-DUAL
vector. Additional sequences in the clone: 'ACC' after Sall site
and before 'ATG' to provide Kozak consensus sequence; 'GG' after
last codon and before HindIII site to maintain reading frame.
Clone distribution: http://bioinfo.clontech.com/orfclones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ADFERHELPASRNRTVGATRINGRSSRSHAVILVKVDQRERIAPFRQREGKLYLJDLA GSEDNRTTGNKGLRLKESGAINTSLFVLGKVVDALAVGLPRYPYRDSKLTRLLQDSIG GSEDNRTTGNKGLRLKESGAINTSLFVLGKVVDALAVGLPRYPYRDSKLTRLLQDSIG GSEBSHSILIATAPERRFYLTUVSALNTRPARSKESVINRPTTNESLQPHALGPVKLSSKE ILGPPRAKRARGPEREIGSPEPMAAPASASQKLSFLGKLSSMDPAMLERLLSLDRLLASQCSGAPLLSTPKRERMYLMKTVEEKDLEIERLKTKQKELEAKMLAQKAEEKENHC
